

Android Native App

New email setup

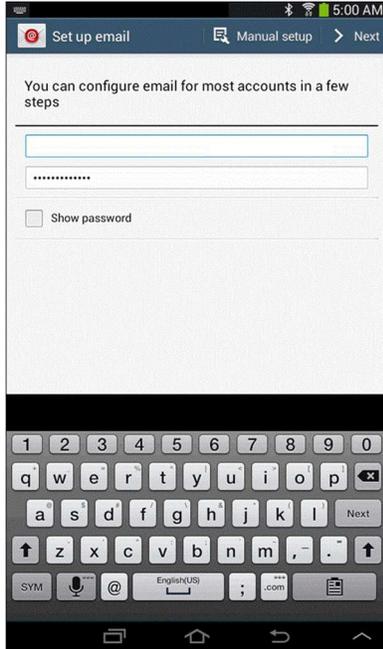

- Open **Settings**.
- Under **Accounts** look for the **Add Account** option.

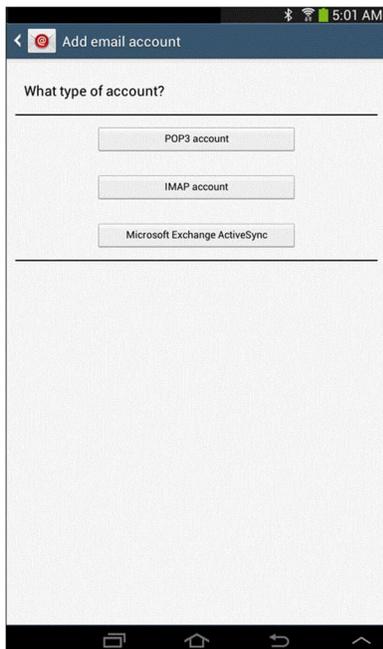

- Select **Email** from the list of account types.

- Select **Other** for account type.
- Enter your email address and password and select **Manual Setup**.
  - You can click **Show Password** in order to verify that the password has been entered correctly.

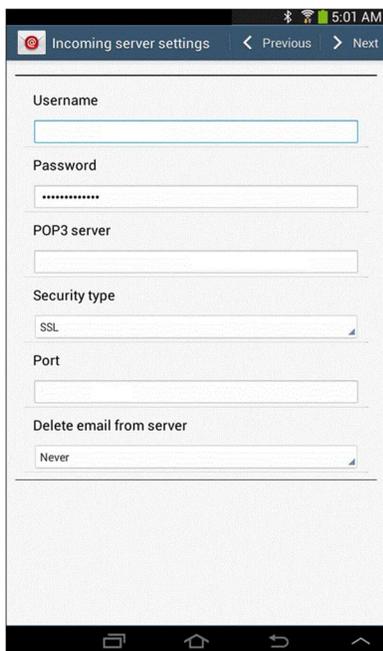

- Choose either **POP3 Account** or **IMAP Account** depending on what you want to use. IMAP is recommended.

## Verify / Enter the Incoming Server Settings:

- Enter **Username** using the complete email address, ex. **example@hamiltoncom.net**
- The password should reflect what was entered earlier during the actual setup.
- Verify / Enter the **Incoming Mail Server** as **mail.hamiltocom.net** or **mail.futiva.net** depending on your email address.
- Set the **Security Type** as SSL
- Verify / Enter the incoming server **Port** as 993 for IMAP, or 995 for POP3

When finished, click **Next**.

## Verify / Change the Outgoing Mail Server settings:

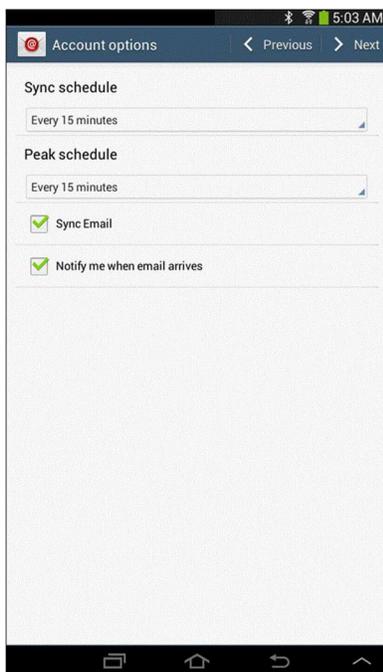

- Set the **SMTP Server** to **mail.hamiltoncom.net** or **mail.futiva.net** depending on your email address.
- Set the **Security Type** as TLS or auto
- Verify / Enter the outgoing server **Port** is set to **587**
- Since this a mobile device, make sure that it's set to **Require Sign-In** and then verify your **Username** (email address) and **Password** are present below.

When finished with this window, click **Next**.

### Final Settings Page:

- Set how you would like to schedule your email to Sync. Set how you would like to be notified when a new message arrives.

- When finished with this window, click **Next**.

- Click **Done** on the final screen.
- Go to the **Home** screen and go into the **Email App**.

**Test** the Email and verify ability to Send and Receive.
